LAS VEGAS — We spent a few minutes with Larry Pizzi of Currie Tech to talk about the company's eflow bicycles. These bad boys are powered by the same battery technology that's in your [MacBook Pro](#), and they provide a "True hybrid" electric bicycle experience.

You can use the eflow to provide anywhere from a low to a high assist boost, which will get you up a hill and down the road at speeds of up to 20 to 30 miles an hour. You can test drive one of these, too, so head on over to the [Currie Tech website](#) to find out where.
