## HYBRID ELECTRIC BICYCLES

### Commuter Case Elite Instructions

The Izip Commuter Case Elite is designed specifically to fit Currie Technologies Ezip and Izip "RMB" (rack-mounted battery) bicycles. Follow these simple instructions to attach your Commuter Case:

Adjustable shoulder strap for comfortable mobility

- 1. Lay the Commuter Case flat on a table, then unfold the two "battery pockets" into shape.** These rectangular recessions will allow the case to lie flat over your bicycle's rack-mounted batteries.
- 2. Unfold the two side-compartments, then lay one of the long plastic strips along the inside of each to provide a rigid structure that holds the compartments' shape.** The strips need to be worked into the edges of each compartment, and the ends of each strip fit into pockets near the top of the compartments as shown.  
*\*Although the strips may initially seem to be too long to fit properly, once they are fully worked into the edges of the compartments they will lie completely flat against the walls.*
- 3. Make sure the shoulder strap is detached or held above the Commuter Case, then drape the Case over your bicycle's rack.** The two silver triangles are reflectors and should face rearward.
- 4. Using the four small straps (two each front and rear), attach the top of the Case to your bicycle's rack as shown.**
- 5. Secure the side-bags to the rack with the two straps shown,** looping them between the battery and the rear wheel.
